

Structure and Functioning of the European and Global Economic System

Lecture 1

**Are Some Cultures Incapable of
Economic Development?**

- Having toured lots of factories in a developing country, an Australian management consultant told the government officials who had invited him: “My impression as to your cheap labour was soon disillusioned when I saw your people at work. No doubt they are lowly paid, but the return is equally so; to see your men at work made me feel that you are a very satisfied easygoing race who reckon time is no object. When I spoke to some managers they informed me that it was impossible to change the habits of national heritage.”
- This Australian consultant was understandably worried that the workers of this country did not have the right work ethic. In fact, he was being rather polite, since he did not call them lazy. No wonder the country was poor, with an income level about 75% less of Australia’s.
- The country’s managers agreed with the Australian but were smart enough to understand that the “habits of national heritage”, or culture, cannot be changed easily ...as Max Weber opined in his seminal work, *The Protestant Work Ethic and the Spirit of Capitalism*, there are some cultures like Protestantism that are simply better suited to economic development ...

- In his 1903 book, *Evolution of the Japanese*, the American missionary Sidney Gulick observed that many Japanese “give an impression ... of being lazy and utterly indifferent to the passage of time”.² Gulick was no casual observer. He lived in Japan for 25 years (1888-1913), fully mastered the Japanese language, and taught in Japanese universities. After his return to the USA, he was known for his campaign for racial equality on behalf of Asian Americans. Nevertheless, he saw ample confirmation of the cultural stereotype of the Japanese as an “easy-going” and “emotional” people who possessed qualities like “lightness of heart, freedom from all anxiety for the future, living chiefly for the present”.

- After her tour of Asia in 1911-1912, Beatrice Webb, the famous leader of British Fabian socialism, described the Japanese as having “objectionable notions of leisure and a quite intolerable personal independence”⁵ She said that in Japan “there is evidently no desire to teach people to think”.
- She described the Koreans as “12 millions of dirty, degraded, sullen, lazy and religionless savages who slouch about in dirty white garments of the most inept kind and who live in filthy mudhuts”⁷. No wonder she reckoned, “[i]f anyone can raise the Koreans out of their present state of barbarism I think the Japanese will”, despite her rather low opinion of the Japanese.⁸

- Before their economic take-off in the mid-19th century, the Germans were typically described by the British as “a dull and heavy people”. “Indolence” was a word that was frequently associated with the Germanic nature.
- Mary Shelley, the author of *Frankenstein*, wrote in exasperation after a particularly frustrating altercation with her German coach-driver; “the Germans never hurry”.
- A French manufacturer who employed German workers complained that they “work as and when they please”.
- The British considered the Germans to be a “plodding, easily contented people ... endowed neither with great acuteness of perception nor quickness of feeling” ... they were not open to new ideas; “it is long before [a German] can be brought to comprehend the bearings of what is new to him, and it is difficult to rouse him to ardour in its pursuit.”. No wonder that they were “not distinguished by enterprise or activity”, as another mid-19th century British traveller remarked.

- Germans were also deemed to be too individualistic and unable to cooperate with each other. The Germans' inability to cooperate was, in the view of the British, most strongly manifested in the poor quality and maintenance of their public infrastructure, which was so bad that John McPherson, a Viceroy of India (and therefore quite used to treacherous road conditions), wrote, "I found the roads so bad in Germany that I directed my course to Italy".
- British travellers in the early 19th century also found the Germans dishonest – "the tradesman and the shopkeeper take advantage of you wherever they can, and to the smallest imaginable amount rather than not take advantage of you at all ... This knavery is universal", observed Sir Arthur Brooke Faulkner, a physician serving in the British army.
- Finally, the British thought the Germans to be *overly emotional*.

Evolution of the Global Economy A Brief Historical Overview

Evolution of World GDP Per Capita (1800=1)

- In 2000, world GDP was about 90 times higher than in 1700.
- World population increased by about 10 times during this period (it was about 600 million in 1750), thus world GDP per capita increased by about 9 times (800%) during this period of 300 years.
- In contrast, world GDP per capita is estimated to not have increased at all from about 1000 BC to about 1800 – a period of 2800 years.
- At the start of the “industrial revolution” (circa 1750), contemporary observers thought that this will probably be a temporary phenomenon – previous growth spurts had not gone much further in the past.

- The term “industrial revolution” (IR) was not coined until about 1840, and real wages were falling during the period 1750-1810. Indeed, some claim that real wages did not attain their previous peak (in about 1500) until the end of the 19th century. For example, the number of hours that a worker had to work in order to buy a given quantity of wheat kept rising from 1500 until about 1880.
- John Stuart Mill (leading British economist) stated in the 1870s: *“It is questionable if all the mechanical inventions yet made have lightened the day’s toil of any human being. They have enabled a greater population to live the same life of drudgery and imprisonment, and an increased number of manufacturers and others to make fortunes. They have increased the comforts of the middle classes...”*

An example of Historical Household Spending Patterns

- Diary data of a bricklayer's family of 5 persons in Berlin in 1800 indicates that its income was allocated as follows:
Bread 44,2%
Meat and Milk 14.9%,
Legumes, Fruit, and Vegetables 11,5%,
Rent 14,4%,
Heating and Lighting 6,8%
Clothing 6,1%.
- In contrast, in 1450 in Germany agricultural workers had to be offered, by custom and law, a specified amount of meat, the quantity of which started declining after 1550.

Explanations for the occurrence in time and place of the Industrial Revolution

- a series of (accidental?) inventions in Britain
- the riches made from the slave trade or plundered from Bengal in the Seven Years War (1756-63) and the opening of the Asian markets to British capitalists
- the profits made from piracy have also played a role ... Keynes (1928) traced England's success from the late 16th century, starting with a treasure Francis Drake had stolen from the Spaniards in 1580.. He wrote, "In that year he [Drake] returned to England bringing with him the prodigious spoils of the Golden Hind. Queen Elizabeth was a considerable shareholder in the syndicate which had financed the expedition. Out of her share she paid off the whole of England's foreign debt, balanced her Budget, and found herself with about £40,000 in hand. This she invested in the Levant Company—which prospered. Out of the profits of the Levant Company, the East India Company was founded; and the profits of this great enterprise were the foundation of England's subsequent foreign investment. Now it happens that £40,000 accumulating at 3.25 per cent compound interest approximately corresponds to the actual volume of England's foreign investments at various dates, and would actually amount today to the total of £4,000,000,000 which I have already quoted as being what our foreign investments now are. Thus, every £1 which Drake brought home in 1580 has now become £100,000. Such is the power of compound interest!"

Explanations for the occurrence in time and place of the Industrial Revolution

- the emergence of a political system providing reasonable personal security and open to innovation, with sufficient dispersion of power and respect for individual property rights for a competitive economy to develop...
- But the IR had asymmetric effects across the world.....

Per capita industrialization levels (UK in 1990=100)

Support for International Trade Depends on Historical Circumstances

- During the 19th century, some countries (Britain, the Netherlands) were ardent supporters of free trade (Britain's share of world manufacturing exports was more than 40%), while others (Germany, Italy, Russia, US (the Civil War was an inter-country dispute regarding trade policy as well...), Japan) were using protection to promote import substitution – export expansion was not always a top priority.
- From 1850 to 1914, unprecedented numbers of migrants and capital moved from Europe to the US, Canada, Argentina, Australia.
- At the turn of the 20th century, Britain was lending to the rest of the world 6% of its GDP. Germany does this today, but it represents a far smaller share of the world economy than the UK did around 1900.
- According to some measures, there was “more globalization” in 1910 than in 2000.
- In 2008, China lent to the rest of the world \$ 400 billion (it was the largest creditor in real terms ever!) - a poor (in per capita income terms) country was the biggest creditor in history.

- At the turn of the 20th century, Britain was lending to the rest of the world 6% of its GDP. Germany does this today, but it represents a far smaller share of the world economy than the UK did around 1900.
- According to some measures, there was “more globalization” in 1910 than in 2000.
- In 2008, China lent to the rest of the world \$ 400 billion (it was the largest creditor in real terms ever!) - a poor (in per capita income terms) country was the biggest creditor in history.

- From 1914 to 1945, the world economy went through a period of dis-integration. With the advent of the 1st WW, free trade, free movement of persons, free mobility of capital and the gold standard were replaced by various impediments and controls.
- The 1st WW brought also the downfall of the Tsarist regime and its replacement by the world's first Communist regime. This new government renounced Russian debts, thus annihilating a large part of France's accumulated foreign wealth.
- Britain was also forced to liquidate a large part of its foreign assets and contracted large debts to finance the war – a process that was repeated during the 2nd WW and lead to the demise of Britain from the status of economic superpower.
- After the 2nd WW, the world economy experienced unprecedented growth. International trade was also growing fast during this period (at about twice the rate of GDP growth).
